

## MINIMIX

Through small mixer **MINIMIX**, Remac Converting Srl has the intention to propose on the market a product created for users who are looking for a machine with high performances at extremely low price. **MINIMIX** can be considered the **NEWMIX small version** of which uses the same concept although it has a different **control system about dosage**. That allows to reduce dimensions and components maintaining a high level of ratio accuracy.

**MINIMIX** is intended to assist those who need a **small size standard mixer for quick adhesive-change** or that could be applied directly to cheap laminators.

**MINIMIX** is the mixer used by biggest manufacturers of adhesives for going directly to the customer for testing, because its small size allows to transport it easily also in the trunk of the car and it is an incentive for stimulating the customer to make rapid adhesive testing without big waste of time.

### **Main features:**

- Electric feeding 220 Volts
- Adhesive dosage realized through volumetric gear pumps
- Max capacity 2.8 lt/min with ratio 100:100
- Pumps driven by motors controlled by inverter
- Max achievable ratio 15:100 or 100:15
- Steel drums separately heated and temperature control with probe
- Max content of drums lt. 10 (on request, is possible to increase the quantity)
- Brewing pipes divided and separately heated
- Easy disassembly of supply head for easier cleaning
- Realized totally with steel
- Size: 700x500xH. 615 mm
- Separated electrical panel with easy-to-use instrumentation
